

HTC Desire 700 Dual Sim Printed Circuit Board (PCB) Replacement

Remove the printed circuit board which houses the charging port.

Written By: Steven Pate

INTRODUCTION

Check to see if the indicator light at the top of the phone illuminates when plugged in. If the indicator light illuminates, the battery is likely at fault as it can no longer hold a charge (if this is the case, see the guide for [battery replacement](#)). If the indicator light does not illuminate when plugged in, the charging port may be faulty. The charging port, or printed circuit board (PCB board), can be replaced if the device if it is no longer responsive when plugged in.

TOOLS:

- [T4 Torx Screwdriver](#) (1)
 - [Spudger](#) (1)
 - [iFixit Opening Tools](#) (1)
 - [Tweezers](#) (1)
-

Step 1 — Back Cover

- Use the spudger to pry the back cover off.

Step 2 — Removing Battery

- Use spudger tool to pry under the battery to lift it up and out.

Step 3 — Remove 8 Torx Screws

- Remove eight 8.3mm T4 screws with the Torx screwdriver.

Step 4 — Prying Off Rear Panel

- Pry the back panel of the screen using the plastic opener.
 - Work your way gently around the device, using picks as necessary to keep the back panel separated.
- ⚠ Use caution not to damage the device, as it takes force to remove the rear panel.

Step 5 — Printed Circuit Board (PCB)

- Disconnect wire going from the printed circuit board to the motherboard using the tweezers.

Step 6

- Using the plastic prying tool, pry the PCB device from the screen of the phone.

To reassemble your device, follow these instructions in reverse order.
